BreastGuard AI

Explainable Breast Cancer Classification & Trustworthy AI Dashboard

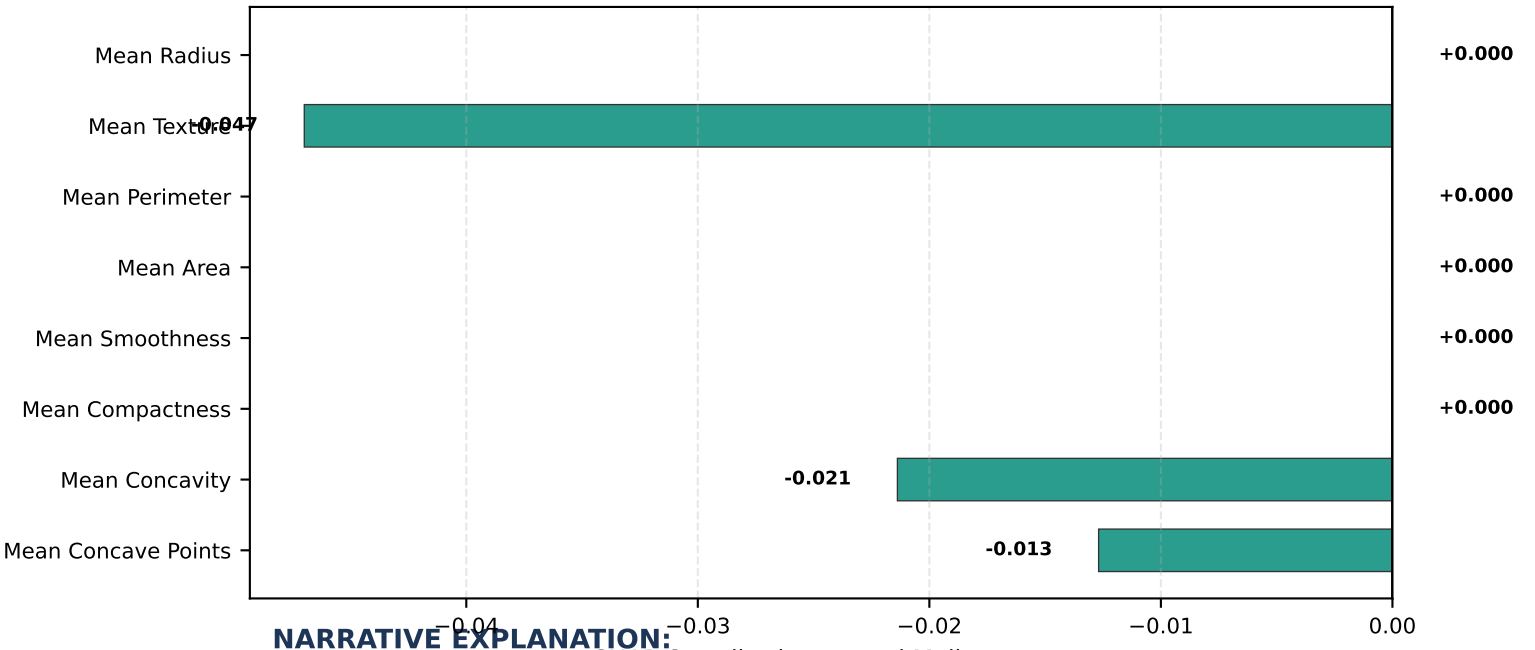
Report Date: 2026-11-06 13:48:11
Decision Threshold: 0.37

Model Architecture: Support Vector Machine
Risk Stratification: Low Risk (<20%)

PREDICTED DIAGNOSIS:

BENIGN

P(Malignant): 2.8%
P(Benign): 97.2%



NARRATIVE EXPLANATION:

Model Decision: Classified as Benign with P(Malignant) = 2.8% (Operating Threshold = 0.37, Population Baseline

Features decreasing model output toward Benign:

- Worst Texture (observed value: 19.260) contributed -0.096 toward the benign classification.

MANDATORY CLINICAL & REGULATORY DISCLAIMER

"This is an educational research prototype, not a clinically validated diagnostic system. It must not be used to diagnose cancer, make treatment decisions, or replace professional medical evaluation."
